

EPA PREPARATION AND CERTIFICATION SEMINAR

The Federal Government of the United States requires all individuals who open a system or container holding a controlled refrigerant to be certified. Persons who work on stationary equipment or use refrigerant designed for these systems can become certified by passing a proctored Section 608 examination. Candidates for this exam can be certified in any of three equipment categories or Universal which covers all categories.

The EPA Certification seminar provides an opportunity for any individual employed in a career that uses refrigerants to be trained and tested in the regulations that mandates safe handling. The student will learn the EPA laws governing the handling and removal of refrigerants from all types of refrigeration equipment, except mobile.

- ✓ Part I – Core Knowledge
- ✓ Part II – Type I Small Refrigeration
